Valley View Median Restoration, 2019	\$1.1 mil	Harry Bridges Buffer, 2010	\$4 mil
Anita May Rosenstein LGBT Center, 2019	\$716,000		

As beautification and mitigation became larger components of infrastructure projects, Griffith Company has increased our landscape and irrigation capabilities. Whether the job requires large or small irrigation systems and planting work or complete integrated habitat mitigation, our team has the know-how and experience to meet every project's needs.

Our landscape crews can be found working on major arterial highways

beautifying our roadways with solar powered irrigation, hearty trees, shrubs and flowering plants, or building athletic parks with little league and soccer fields, horse trails and tot lots.

We also bring extensive experience to habitat mitigation; restoring a coastal cienega, creating new riparian wetlands, and establishing native vegetation at our landfills. Every project brings different demands, so our wide-ranging experience ensures success.

In addition, our team is well versed in design-build landscape and irrigation installations. We can help you from start to finish, or any place in the process. Even if a design is provided, our experience will help minimize design conflicts or perhaps provide economical alternatives.

When we finish a project, we know it will be timely, economical and beautiful- a testament to our experience, know-how and commitment.
