		Seaside Avenue/ Navy Way, 1997	\$36mil

A number of Griffith Company's largest and most complex projects to date include contracts awarded by two of California's — and the nation's — most important economic engines: the Ports of Los Angeles and Long Beach. As Griffith Company builds various

multimillion-dollar endeavors, we have helped modernize two of the busiest ports in the world. Under significant pressure to meet critical time frames, avoid tens of thousands of dollars a day in potential liquidated damages, and allow continuous terminal

operation, our crews work around the clock to ensure success. Our port projects allow us the ideal opportunity to demonstrate our specialized capabilities, effective project management and partnering process, with award-winning results.
