Nogales Grade Separation, 2016	\$7.1 mil		

Utility improvements are an integral part of almost every project Griffith Company constructs. Our team is capable of constructing water, sewer, drainage systems, and all of the structures that are often associated with these work types. Griffith Company operations keep our infrastructure flowing. Our specialty underground crews bring the highest level of expertise and construction knowledge to each job, helping solve problems and providing solutions for

the challenges that exist with construction and design.

Our team is safety conscious, and safety is always first! All our field supervisors and labor forces are OSHA trained in 10 hour, fall protection, trenching/ excavation, and CPR certified. We take pride in knowing that all of our workers go home to their families after every shift. Safety is part of our culture and will always be part of the Griffith Way.

Whether it's deep sewer, large diameter concrete storm drain pipe, or steel and ductile iron waterline, our team can do it all. Whether it is fast track schedules, wide open - high production arterial work, multi-staged street work under heavy traffic or short window night closures on busy airports, our crews are ready to provide professional, quality underground work.
