COMPANY**

Victoria Avenue Bridge Seismic Retrofit

Location: Riverside, CA
Owner: City of Riverside

Total Value: \$9.6 mil
Completed: 2006

Griffith Company began construction on the Victoria Avenue Bridge in Riverside during early June 2005. The bridge is an important part of the City's heritage and dates back to the late 1920's. The project brings the bridge up to code with current seismic standards through a series of retrofit alterations while maintaining the heritage of the historic architectural features. The retrofits included reinforcement of the foundation and abutments, strengthening of the arches and stiffening of the bridge through the reconstruction

of the deck. During construction, pedestrian access was maintained by constructing a pedestrian bridge adjacent to the existing bridge. Our crews met the City's aggressive two-hundred fifty day schedule.

Our hard work and quality of construction not only passed muster with the City Historical Society, but garnered the prestigious 2007 AGC California Constructor Award in the Most Difficult Job Category.
