

**GRIFFITH
COMPANY**

Materials Division

Portable Rock Crusher Plants

Griffith Company has two Portable Crushing Plants that are capable of crushing up to 3500 tons of concrete and asphalt per day.

These plants can move anywhere in California to job sites where there is a need to recycle concrete, asphalt and rock into a crushed miscellaneous base material.

We provide a variety of materials that can meet different specifications, such as Green Book, Cal-trans and others.

Griffith Company Hicks Canyon Recycle Site

Griffith Company has a recycling site in Irvine, California. At this site we take in loads of recyclable material. Once received, the rubble is then crushed into a 1" minus base. We normally carry 10,000 to 60,000 tons on average and sell the base by the ton. This base is available for pickup, or we can also generate a delivered price for your particular job.
