		City of Los Angeles Harbor Department- Promenade Project 2020-21	\$2.5 mil

For well over one hundred years, Griffith Company has rehabilitated shipping ports, railyards, airports, commercial developments and well traveled highway systems. These businesses, operations and systems often are marred by a legacy of environmental distress caused by years of sometimes unknowing polluting. Griffith Company has expanded our expertise with the ability to mitigate most all environmental issues we may encounter on a project.

Our Environmental Services Division brings decades of experience to solve a myriad of

environmental issues that may otherwise stop progress on a job. Our team is composed of highly trained field technicians, engineers, geologists and certified industrial hygienists who are expert at understanding EPA 40-CFR, DOT-49 CFR, California's Title 22 and all governing rules and regulations. We offer our clients access to the best management methods available, while assisting with consultation on mitigation and recycling and providing the best disposal options at the lowest cost. Some of our services include:

- Regulated and hazardous waste excavation and general hazardous waste site operations
- Disposal methods and DOT compliance
- Asbestos sampling, removal, and disposal
- Environmental consulting
- Lead compliance plans, work plans, transportation plans, and agency interface.

This expertise is coupled with our extensive knowledge and experience in all facets of heavy-highway construction, from fixed price contracts to design-build, we're ready to help.
